

### **Assignment of an AVV<sup>1</sup> entry if two entries of the AVV are to be considered**

Construction and demolition wastes containing asbestos may be assigned to the entry **17 06 05\*** (Construction materials containing asbestos) as well as to the entry **17 09 03\*** (Other construction and demolition wastes (including mixed wastes) containing dangerous substances) of the AVV.

The first case AVV focuses on the content of asbestos in the waste, the other one is based on the waste overall.

In the state of Hesse mixed construction and demolition wastes are classified as hazardous waste, if they contain more than 0,1% by wt. asbestos.

---

<sup>1</sup> Abbr. for "Abfallverzeichnis-Verordnung", translated: German Waste Catalogue Ordinance. Entries and designations of the AVV comply with those of the European list of wastes (Decision 2000/532/EC)
