

Assignment of an AVV¹ entry if two chapters of the AVV are to be considered

The deep drawing packets may be assigned to entry **12 01 02** (ferrous metal dust and particles) as well as to **19 12 02** (ferrous metal).

Assigning the waste to entry 12 01 02 considers that the waste originates from a process of mechanical shaping of metals.

The entry 19 12 02 (ferrous metal) should be used for waste generated by mechanical treatment (e.g. sorting or compacting) in a separate facility.

¹ Abbr. For “Abfallverzeichnis-Verordnung“, translated: German Waste Catalogue Ordinance. Entries and designations of the AVV comply with those of the European list of wastes (Decision 2000/532/EC)
