

### **Assignment of an AVV<sup>1</sup> entry, if two chapters of the AVV are to be considered**

For the assigning of cleaned glass of cathode-ray tubes a few entries of the AVV may be considered.

The AVV entry **16 02 15\*** (Hazardous components removed from discarded equipment) describes the origin of the glass of cathode-ray tubes correctly to the headline of chapter 16 02 (Wastes from electrical and electronic equipment), but doesn't provide any information on the composition of the waste.

The AVV entry **17 02 04\*** (Glass, plastic and wood containing or contaminated with dangerous substances) refers to the composition of the waste; while its origin is faded into the background by assigning the waste to chapter 17 (construction and demolition wastes).

The AVV entry **19 12 11\*** (Other wastes (including mixtures of materials) from mechanical treatment of waste containing dangerous substances) underlines the origin of the waste from the mechanical treatment of waste (e.g. sorting, crushing, compacting, pelleting).

In practice all three entries can be applied. In the LAGA<sup>2</sup> notices M 31 exclusively the AVV entry 16 02 15\* is mentioned for this kind of waste (LAGA notice 31: Technical requirements on the disposal of electric and electronical waste and on the construction and operation of facilities for disposal of waste electric and electronical equipment)
